

HAVE COVID-19? KEEP YOUR PETS SAFE.

To ensure pet safety, the CDC recommends restricting exposure to them if you become diagnosed (or suspected) with COVID-19 until more concrete evidence of virus transmission can be determined.

We know this is hard, but avoid any close contact with your pet.

No cuddles, kisses, licking, or sharing of food.

If possible, have another household member care for them. If you must, follow appropriate protocols.
